EDUCATION

Louisiana State University (LSU), Baton Rouge, LA **Graduating May 2030**
Pursuing bachelors in Computer Engineering
HS GPA: 4.23 Undergrad GPA: 4.0
Minor: Honors
Related Coursework: Calculus II Honors (MATH 1553), AP Physics C Mechanics, Intro to Computer Engineering (EE 1820), Foundations of Programming at Tulane SOPA (CMPS 1010)

EXPERIENCE

Robotics team captain **August 2023 - June 2026**
Pride Robotics, New Orleans, Louisiana

- Advanced from junior programmer to Programming & Electronics lead and finally to team captain within 2 years.
- Led an internationally competitive (top 5-10% worldwide), 20-member robotics team across programming, electronics, design and manufacturing subteams; delegated and coordinated build tasks using a shared team calendar, and resolved cross-subteam engineering issues leading up to competitions.
- Developed semi-autonomous robot control systems in Java using deadwheel odometry, camera-based computer vision, and internal laser distance sensors, automating driving and scoring operations. This allowed us to only use one driver using minimal inputs during competition, despite our robot design being very complex.
- Managed collaborative software development through GitHub using version control and structured code commits. The team's 2025–26 codebase received 586 unique clones from users worldwide after advertising on public forums.

Formula SAE powertrain member **August 2026 - Present**
LSU Tiger Racing, Baton Rouge, Louisiana

- Designed a master electrical panel in SolidWorks, consolidating critical electrical connections while accommodating chassis geometry and component clearance constraints.
- Developed a high-voltage interlock mounting bracket using SolidWorks sheet metal tools, accounting for mounting requirements and surrounding component interference.
- Designing welding jigs for battery container fabrication, incorporating alignment and positioning requirements.
- Developing a 12V-to-5V buck converter in KiCad using the TI LMR51430, including schematic design, component selection, and PCB design.

IT Support **May 2024 - August 2026**
Law office of Jon Bethune, New Orleans, Louisiana

- Diagnosed and resolved Windows hardware, software, networking, and peripheral issues to maintain reliable operations in a small law office.
- Recovered and consolidated an accidentally deleted file archive stretching back to 2012 by restoring files from legacy computers and individually saved files on the cloud.
- Prepared digital evidence and configured presentation hardware, displays, and software for courtroom use, troubleshooting connectivity and compatibility issues before proceedings.

Service Assistance **July 2025 - August 2025 and May 2026 - August 2026**
La Madeleine, Elmwood, Louisiana

- Bussed tables and washed dishes during long 7-10 hour shifts in a fast paced environment.
- Troubleshot and repaired malfunctioning restaurant equipment (dishwasher, soda machine, sanitizer dispensers) to reduce operational disruptions during high-volume service.

SKILLS

Programming: Java, Python, C++, Verilog
Engineering/Technical: Robotics programming, Fusion 360, Solidworks, KiCAD, electronics troubleshooting, hardware troubleshooting, Git/GitHub
Software: Windows, Microsoft Suite
Professional: Team leadership, technical troubleshooting, task management, customer support
